

Keyedin® Solutions Announces Major Enhancements to KeyedinProjects with launch of v5.2

Social Collaboration Tools Top the List of New Features in the Project Management Software Suite

Minneapolis, Minn. — December 13, 2012 — [Keyedin Solutions](#), a global SaaS (Software as a Service) solutions provider and consulting services organization, has announced a new release of its globally-acclaimed Cloud-based project management suite, [KeyedinProjects™](#).

KeyedinProjects™ v5.2 includes wide-ranging new-to-market functionality that is immediately available through its SaaS platform or as an on-premise or hosted license.

A key addition is the new Social Collaboration feature that enables project teams to communicate and collaborate within the software and work together using social tools.

“*KeyedinProjects™* provides an unbeatable platform for core project management processes. Now, with less formal information flows and communication paths, we’re giving our customers another layer of efficiency with the ability to collaborate in real-time”, notes Karen Adame, Chief Product Officer at Keyedin Solutions.

“By adding Collaboration to *KeyedinProjects™ v5.2*, we have enabled users to record threaded discussions so the team can communicate, interact and help each other online. Importantly, this keeps team discussions within the project environment, rather than in personal email systems or on insecure social networks.”

Recognizing that even best of breed products cannot stand alone, *KeyedinProjects™ v5.2* includes a portfolio of web services that allow for easy integration with third party finance, CRM, HRIS and other applications while ensuring data integrity and security.

A new Alerts and Notification function is also included in v5.2. Users can configure Alerts to notify them when they or their teams have tasks assigned or overdue. Alerts can be delivered within the software on a new Notification tab, or via the user’s email system.

A task-based planning tool, which displays projects as a Gantt chart, has been enhanced with an option to display a critical path which can be toggled to red. A new task filter enables only critical path tasks to be displayed giving users visibility into priority activities.

User interface customization – widely praised by the customer base – has been further improved to increase flexibility of data selection and display. The Contract Management module has been enhanced to include Billing by Hour.

As *KeyedinProjects™* achieves global reach and becomes the project management suite of choice for multi-national operations, multi-lingual support has been enhanced in v5.2. Whatever language the data is held in, users can view the *KeyedinProjects™* screens in any one of eight supported languages. Languages added in this update include: Spanish, Latin American

Spanish, Portuguese and Brazilian Portuguese. The company has signalled its intention to develop the high-technology Scandinavian and Baltic markets and expects to add four more languages in the next version, scheduled for release Q1, 2013.

KeyedInProjects™ was first launched mid-2012 by KeyedIn following the successful acquisition of UK-based software developer, Atlantic Global. It received immediate acclaim within the enterprise business applications market by bringing together three scalable elements of project management into a single Cloud-based suite: Professional Services Automation (PSA), Project/Program Management Office (PMO), and Project Portfolio Management (PPM).

KeyedInProjects™ is currently accessed by more than 26,000 users in 167 organizations globally. For a free trial of the new *KeyedInProjects™* v5.2, visit www.keyedin.com.

About KeyedIn Solutions

KeyedIn® Solutions was founded by veteran ERP industry executives to transform the traditional enterprise software systems market through a suite of integrated business applications delivered on a true SaaS platform and a consulting organization rich in business, industry and IT expertise. KeyedIn SaaS Solutions replace rigid, on-premise enterprise systems in specialized vertical markets with more agile, feature-rich and cost-effective .NET applications that scale to any environment. The KeyedIn Consulting Group provides consulting services around existing or planned systems, helping organizations achieve a strong return on their IT investment and realize a true business advantage in their market. Whether engaged independently, or in conjunction with the company's leading-edge technology platform, the KeyedIn Consulting Group delivers results for a wide range of industries worldwide.

Organizations look to KeyedIn Solutions for innovative, integrated business applications and results-driven consulting services delivered with integrity and a laser focus on their needs. You should too. Learn more at www.keyedin.com.
